"Critical Study of Humoral Modifications of the Bouillaud-Sokolowski Type of Rheumatism Under the Influence of Treatment"

Bucharest, Revista Sanitara Militara, Vol. 62, No. 3, May-June 1966; pp 403-411

Abstract: Study n 60 members of the armed forces, aged on the average 22 years; very comprehensive physical examination with electrocardiogram, chest fluoroscopy, and detailed laboratory studies including sedimentation rate, fibrinogen, mucopolysaccharide and c-reactive protein in serum and electrophoresis, antistreptolysin O. The erythrocyte sedimentation rate determination was one of the most important criteria, despite its simplicity, it was elevated in 100% of the cases. Data are tabulated and discussed in detail for each of the tests. 6 tables, 6 Western and 2 Soviet, 7 Rumanian references, manuscript received 21 February 1966.

"Considerations on Some Cases of Rhythm Disturbances in Patients Hospitalized
in Internal Diseases Section I of the Central Military Hospital During the
Past Two Years"

Bucharest, Revista Sanitara Militara, Vol 62, No 4, Jul-Aug 66,
pp 659-673.

Abstract: The authors analyzed the cases of cardiac rhythm
disturbances observed in the internal disease section of a
military hospital during two years. They found that the vast
majority of such disturbances seen in a military environment
consist of functional cases of extracardiac origin or are
caused by cardiac lesions. The cardiac lesions are mostly due
to articular rheumatism in patients under 40 years and to
atherosclerosis in older ones.

Includes 15 figures and 19 references, of which 14 Rum-
anian, 4 French and one English-language. -- Manuscript sub-
mitted 24 March 1966.

SOURCE: Revista sanitaria militar, no. 4, 1964, 579-587

TOPIC TAGS: rickettsial disease, circulatory system disease, military medicine

ABSTRACT: Discussion of 5 cases of apparently infectious (rickettsiosis?) coronary disease in young officers; allergic cases, atheromatous ones. Latter are attributed to idiopathic disturbances of lipid metabolism when occurring in persons of this age. Isolated clinical experiences are reviewed in the context of published data.

"Considerations on the Pathogenesis of Atrio-Ventricular and
Intraventricular Conductive Disturbances."

Bucharest, Revista Sanitara Militara, Vol 59, No 3, May-Jun 63,
pp 439-445.

Abstract: Analyzes the possibility of the existence of purely
functional conduction disturbances conditioned by vagotomy and
the relation between the functional and organic elements. Using
6 case studies, the authors conclude that these disturbances
are always due to a lesional organic process which may be due to
various causes, aggravated in some cases by the influence of
local vegetative factors. The primary role in the organic-func-
tional disturbances is played by the lesion, with the vagal
hypertony being secondary. The authors deny the possibility
of a purely functional disturbance in the absence of an organic
substratum. The prognosis and therapeutic measures must depend
on the evaluation of this substratum. Includes 15 figures and
1/1 7 references, of which 2 are Western.

TITLE: Concerning the atherosclerotic-type disturbances of lipid metabolism in young people with essential arterial hypertension 22

SOURCE: Revista sanitara militara, v. 61, no. 1, 1965, 15-22

TOPIC TAGS: biologic metabolism, blood pressure, circulatory system disease

ABSTRACT: To study the disturbances in lipid metabolism of the atherosclerotic type in essential arterial hypertension in persons under 40 years old, the authors examined the lipid balance in 97 patients with essential hypertension, of whom 62 were between 18 and 24 years and 35 between 25 and 40 years. The control group consisted of 30 patients between 40 and 81 years suffering from clinical and humoral atherosclerosis. The various clinical and laboratory tests confirmed that essential arterial hypertension induces changes in the lipid balance, even in the beginning stages of the disease and in young persons. PROCESSES AND PROPERTIES INDEX

The speed of thermal decomposition of chloropierin.
 Dan Radulescu and G. Zamfirescu, *Bul. soc. chim.*
Romania 17, 87 (1935). The rate of decompn. of
 chloropierin (I) to phosgene and nitroxy chloride (II) was
 followed by heating in sealed bulbs and detg. the amt. of
 I produced by breaking under 0.1 N KMnO₄ at 45-50° and
 titrating the excess KMnO₄ not reduced by the nascent
 HNO₂ from the hydrolysis of II, with KI and Na₂CO₃.
 The reaction is unimol. with const. $K_{100} = 0.11 \times 10^{-5}$,
 $K_{110} = 0.23 \times 10^{-5}$; $K_{120} = 0.97 \times 10^{-5}$; $K_{130} = 3.27 \times 10^{-5}$.
 The reaction to form the 2 poisonous gases would be almost
 instantaneous at the temp. of explosion of munitions. I
 is decompd. photochemically by violet or ultraviolet
 light but the reaction though rapid at first soon stops
 because the product II absorbs the violet light and a small
 concn. of it protects the rest of I. This explains the relative
 stability of I in daylight. Janet K. Austin

TITLE: Uropepsin levels in ulcers in chronic hepatitis, and in hepatic cirrhosis, with some personal research

SOURCE: Revista sanitara militara, no. 6, 1964, 983-991

TOPIC TAGS: hepatitis, digestive system disease, tissue disease, biochemistry

ABSTRACT: A preliminary study of uropepsin levels in 22 cases of ulcers, 16 cases of post-virose chronic hepatitis, and 4 cases of decompensated hepatic cirrhosis showed the following:

Card 1/2

L 64573-65

ACCESSION NR: AP5023482

invariably low, with no permanent connection with the acidity of the gastric juice. 3. The measurement of uropepsin cannot replace the direct analysis of the gastric juice, but when it is not possible to probe the patient, it can be used for diagnostic evaluation together with the regular methods. Abstract [Authors' English summary modified]: The authors report an outbreak of alimentary toxoinfection with a strain of B-group salmonella, namely Salmonella vom. Approximately 400 individuals were affected after eating some pork; the germs were isolated from approximately 47 percent of the patients and from the meat. The clinical evolution was benign. The germs were sensitive only to streptomycin, chloramphenicol and neomycin.

Il s'agit d'un théorème d'existence. Si les fonctions $f_i(x, y_i)$ sont "approximativement continues en projection" (notion définie par l'auteur), il existe une solution locale du système $dy_i/dx = f_i$, vérifiant les données de Cauchy. Généralisation pour les systèmes d'équations aux dérivées partielles.

2873. STREPTOMYCIN AS A SOURCE OF POSSIBLE ERRORS IN THE DETERMINATION OF BLOOD UREA - Streptomicina ca sursă de erori posibile la dozarea ureei în sânge - Zamfirescu I., Isbănescu C., Isidor N. and Garibaldi A. Clin. Bolilor Infecț. I.M.F., București - VIATA MED. 1958, 5/7 (655-659) Graphs 1 Tables 3

Determinations of urea on blood samples kept in bottles which had previously contained streptomycin gave values higher than those found in samples collected in the usual way. This observation led to a study of the action of hypobromite on streptomycin, as used in urea determinations, in view of the fact that the antibiotic contains 2 guanidine groups and is thus structurally related to urea. It was found that urea determinations on blood kept in inadequately cleaned streptomycin bottles (i.e. bottles which still contained traces of the antibiotic) gave values which were 2-9 g./l. too high, owing to nitrogen from the antibiotic being measured along with nitrogen from the blood urea. OF TYPHOID FEVER - Valoarea diagnostică a meduloculturii în febre
tifoidă - Zamfirescu I. et al. - MED. INTERN. (București) 1957, 9/4
(601-606) Graphs 1

Bone marrow cultures have given better results than blood culture, especially in
the course of the 3rd-5th week. The use of large amounts of bone marrow extract
(3-5 ml.) is recommended. The method is very successful, and may be used for
the diagnosis of other septicaemias, especially in infants and young children.

AUTHOR: Zamfirescu, I.

TITLE: The solution of a system of linear algebraic equation for geodesy by means of a CIFA-1 electronic computer

PERIODICAL: Referativnyy zhurnal, Astronomiya i Geodeziya, no. 2, 1962, 32 - 33, abstract 23207 ("Probl. automat.", 1960, no. 2, 165 - 167, Rumanian)

TEXT: The author describes the logical diagram of a program for solution of systems of linear equations with symmetric positive definite matrix on a CIFA-1 electronic computer operating by the fixed point mode. The accuracy of calculations is 0.001%. Solution is performed using a modified Seidel iterative method by the formula:

$$x_{n+1, i} = x_{n, i} + (\omega/a_{ii}) [b_i - \sum_{j=1}^{i-1} a_{ij} x_{n+1, j} - \sum_{j=i+1}^N a_{ij} x_{n, j}] - \omega x_{n, i},$$

Card 1/2

The solution of a...

S/035/62/000/002/047/052
AC01/A101

where $\omega = 1 + \alpha^2$. The meaning of quantity α is not specified in the article. It is noted that a solution of systems of 14 - 22 order takes on an average 1 - 2 hours (80 - 120 iterations).

O. Sheynin

TITLE: Some considerations concerning tangential efforts and strains in pipe walls

SOURCE: Constructia de masini, no. 3, 1965, 144-150

TOPIC TAGS: pipe, strain, material deformation, stress analysis

ABSTRACT: A mathematical analysis of the calculations involved in obtaining the tangential efforts and strains to which pipe walls are subjected. The author points out that the conclusions obtained from an analysis of tangential deformations and strains are similar to those reached by an analysis of radial ones. Orig. art. has: 5 figures and 51 formulas. [Based on author's Eng. abst.] [JPRS]
